## 1.0 VAX 11/780 SYSTEM

This statement has been prepared jointly by Dr Larry Reeker, Head of the Department of Computer Science and a member of the Prentice Computer Centre Management Committee and Mr Alan Coulter, Director, Prentice Computer Centre.

The proposal to purchase the VAX 11/780 was considered by the Prentice Computer Centre Management Committee at its meeting of 30-7-80 and was approved by that Committee for inclusion in the recommendations for Central Computing Equipment allocations for 1981 and referred to the Computing Policy Committee. At its meeting of 9.10.80 the Computing Policy Committee recommended the purchase of the VAX 11/780 to the Equipment and Maintenance Committee. Following deliberation by this Committee and the approval of other higher level Committees within the University, contracts were finalised by the University (represented by the Legal Officer, the Deputy Bursar and the Director, Prentice Computer Centre) with Digital Equipment Australia Ltd. The VAX 11/780 was delivered on 9-4-81 and after a period for installation and acceptance testing it should be turned over to the Computer Centre by early May.

The original time-table envisaged was for the new system to be settled in during first semester 1981 and to be fully operational by second semester 1981. The lengthy debate on the choice of operating system has necessarily delayed implementation. It can be appreciated that many aspects of tooling up are dependent upon the operating system to be used. A recommendation has now been made by the Computing Policy Committee that VMS with UNIX type of facilities provided through University of California Berkeley Software Tools System should be implemented on this VAX system. On this basis the Prentice Computer Centre is planning to make the VAX available to users for testing and familiarisation by July on an uncharged basis (at this stage some facilities such as file back-up, remote printing and high speed file transfer to the KL may not be available). Charging and full implementation of all facilities will follow as quickly as possible.

The VAX 11/780 will be implemented as a low overhead system servicing teaching and research work for the University of Queensland and Griffith University (LOADS system). Senate has approved that in the first year of operation the charges will be 75% of equivalent job costs on the KL. It is hoped that once experience has been gained with the nature and costs of operation further reductions will be possible in the future. It should be noted that use of primary memory (MOS) will not enter into the charge calculation. This together with low priority charges outside of prime shift should assist those with large jobs.

Something more should be said about the debate on VMS and UNIX. Both of the writers have no disagreement on the fact that UNIX is a most significant development in the evolution of operating systems. UNIX is a simple but elegant operating system with consistency

throughout and it is therefore a very good candidate for transportability from one type of equipment to another.

It is not a difficult system to learn and is enthusiastically supported by those who are using it as are giving high user productivity. UNIX cannot be entirely divorced from machine architectures as there is a need to write special device drivers, hardware error logging, on line diagnostics, memory handling programs etc. The fact that 95% of UNIX is written in a higher level language would assist significantly in the effort required for such development work. It is natural, however, that the Director of the Prentice Computer Centre would put high weight on the immediate problems of implementation of the new system to provide computing power as quickly as possible, on the problems of training Centre Staff and users and have regard to the current position that Fortran under UNIX is about half the speed under VMS, that there is no batch stream software or support for hardware maintenance. What has been done is to obtain a system called Software Tools which was developed by the University of California Berkeley to provide UNIX facilities under the VAX operating system (but obviously not as efficiently as a pure UNIX system). This will give all users the chance to experience user type facilities under UNIX. Additionally, the Centre has applied for a UNIX licence so that Centre staff in the non user period will have the opportunity to study and evaluate UNIX. This sort of evolutionary development we see as a pre-requisite for the planning of computing equipment strategies in the 1982-84 triennium. Indeed the Computing Policy Committee in its resolution recommending that the VMS system be adopted placed particular emphasis on the need to consider manufacturer independent operating systems and communications software in planning future additions to central and departmental equipment.

The Computer Science Department is, meanwhile, exploring options to provide the benefits of UNIX to advanced students so that they may gain a feel for the usefulness of this type of system in software engineering.

Larry Reeker, Head Department Computer Science  
Alan Coulter, Director Prentice Computer Centre

## 2.0 OPERATING RESULTS 1980

The costs of operations in 1980 of \$1,229,000 were covered by revenue of \$1,170,000 and a contribution toward salary supplementation of \$59,000.

The revenue increases were due to growth in demand. As compared with the previous year computer usage was higher by 32%, contract programming by 45%, and maintenance of departmental computing equipment by 52%. Fifty percent of the total costs of Operations of the Computer Centre were covered by funds from other than the General Recurrent Fund.

The increase in usage of the central computing facility in 1980 was distributed as follows:-

	%
University of Queensland	
Teaching and Research .	58%
Administration	21%
Affiliated	12%
Griffith University	6%
Other Approved Users	3%
	<u>100</u>

Jobs on the KA system increased by 9% (30% increase in terminal work) and on the KL system by 58% (50% increase in terminal work).

The proportions of usage by various user categories were as follows:

	1980	
	USAGE %	JOBS %
UNIVERSITY OF QUEENSLAND		
Teaching & Research Departments	41	66
Administration	34	7
Affiliated Groups	10	8
GRIFFITH UNIVERSITY		
Schools	4	10
Administration	4	2
OTHER APPROVED USERS	7	7
	<u>100</u>	<u>100</u>

N-262  
27APR81

(Note - Usage refers to central computing only and does not include computers established in the departments of the University)

Support for departmental computing equipment has increased significantly. In 1980, 144 orders were placed on behalf of departments for computing equipment involving an expenditure of \$568,756.

Emphasis has been given to training courses for University staff and post graduate students. Thirty-five courses and sixteen seminars attended by a total of 858 people were conducted during 1980.

### 3.0 NEW TTY TYPES

Two terminals have been added to the list of types which may be specified in the SET TTY TYPE xxx command. They are the Visual 200 (VS200) and the ADM-3A (ADM3A). Setting these types results in a tidier treatment of RUBOUT, Control-W (and in the case of the Visual 200 of Control-U) than on hard-copy terminals.

For information on system defaults which apply to these and other terminal types type HELP TTYTYP.

Allan Woodland  
extension 3944

### 4.0 LIBRARY NEWS

A new version of IMSL has been placed on NEW:. It reflects 41 new routines and four deleted routines. The deleted routines are:

GGAMS	-	replaced by	GGAMR
GGAMT	-	"	"
GGBIR	-	"	"
GGMLT	-	"	"

More information can be obtained by contacting Leonie Roberts.

## 5.0 INFORMATION CONCERNING COURSES

### 1. General Notes

1. Users not familiar with the PDP-10 System must attend an Introductory Course before enrolling in other courses.
2. An outline of the content of each course is contained in Newsletter N-260.
3. Staff and post-graduate students are admitted free; other users are charged on the rate of \$10.00 per half-day session.
4. All courses are conducted in the Client Room, Hawken Building.
5. Enrolments may be made by contacting Barry Maher, ext. 3139 (preferably between 12.00 - 2.00 pm).

### 2. Courses for May-July

1. VG Course : May 5 - May 7  
3 full days 9.00-12.00 + 2.00-5.00  
each day
2. Introductory Fortran : May 11 - May 15  
Programming Course 5 full days 9.00-12.00 + 2.00-5.00  
each day
3. RUNOFF Course : May 20 - May 22  
3 full days 9.00-12.00 + 2.00-5.00  
each day
4. SPSS Course : May 25 - May 29  
5 half days 9.00-12.30 each day
5. Fortran Debugging : May 26 - May 27  
Course 2 half days 2.00-5.00 each day

N-262  
27APR81

- 6. Plotting Course : June 1 - June 5  
4 half days 2.00-5.00 each day
- 7. Introductory Course : June 9 - June 10  
2 full days 9.00-12.00 + 2.00-5.00  
each day
- 8. Introductory Course : June 11 - June 12  
2 full days 9.00-12.00 + 2.00-5.00  
each day
- 9. SPSS Course : June 15 - June 17  
3 full days 9.00-12.00 + 2.00-5.00  
each day
- 10. Introductory BASIC : June 23 - June 25  
Programming Course 3 full days 9.00-12.00 + 2.00-5.00  
each day
- 11. 1022 Course : June 29 - July 3  
5 half days 2.00-5.00 each day

extension 3139

#### 6.0 TELEPHONE EXTENSIONS

The User Services (non-charged) Section comprising Mark Johnson, Barry Maher and Noela Meier have moved to new quarters on the Ground Floor of the Hawken Building.

Unfortunately, telephone connections have been delayed and the only extension available is 3139. Any queries about courses, preliminary advice and assistance etc. should therefore be directed to this extension.

Tony Bird  
extension 3139

# SYSTEM PERFORMANCE REPORT

For node KA10 there were 30 working days in the period 1/Mar/81 to 31/Mar/81

	< KA10 >
